Cervical Screening Programme ID: [csp_id]
PPS No: [PPSN]

Dear [Surname]

Your cervical screening sample taken on [testdate] was tested for the human papillomavirus (HPV). Your results show that **HPV was found**. Because HPV was found, we also checked for changes to the cells in your cervix (neck of the womb) and **abnormal cell changes were seen** which require further investigation. It's important that you attend for further examination at a colposcopy clinic.

Please contact the doctor or nurse who took your test to discuss the result and what to do next. Your doctor has received the result of the test and will arrange an appointment for you.

You can read more about what your results mean in the leaflet, 'Important information about your HPV cervical screening results'. Your result is listed under result – HPV found and abnormal cell changes found. You will also find enclosed a leaflet with more information on colposcopy.

You can read more on hse.ie/cervicalcheck about your results, colposcopy and the benefits and limitations of screening.

Thank you for participating in our programme.

Yours sincerely

Dr. Caroline Mason Mohan
Interim Clinical Director - CervicalCheck
